

Zirconia ZrO₂ ceramic substrate :

Zirconia ZrO₂ ceramic substrate

main feature:

High temperature resistance , sensitive electrical parameters , high toughness, high bending strength and high wear resistance , excellent thermal insulation performance and thermal expansion coefficient .

typical application:

Induction heating tubes, refractory materials, use of heating elements , oxygen sensors, solid oxide fuel cells and high temperature heating elements and other fields . It is also widely used in the field of structural ceramics.

Product parameters:

Basic parameters:	
Sintering temperature	2370°C
density	6.27g/ cm ³
color	White
size	Within 100x100x1.0mm, can be customized
polishing	single throw or double throw
