

Membrane box :

Membrane box

The elastic film box is usually made by assembling the upper and lower high transparent polystyrene (PS) plastic shells with high elastic films. The elastic film box design can tightly suspend the product to be packaged in the middle, avoiding the damage and damage of the product to be packaged due to collision and slipping during transportation. It is often used in various precision optical components, crystals, and dentures. Packaging, transportation and storage of watches, jewelry and various irregular and fragile products, with high safety, reliability and stability .

Product parameters:

model	Outer box size (mm)	Inner dimension (mm)
OCP -M-3816	38x38x17	31x31x13
